

Double-Take[®] RecoverNow[™] for AIX

Protect Critical Business Data and Applications With Easy, Reliable Disaster Recovery

Real-time replication, continuous data protection and simple management deliver comprehensive, affordable disaster recovery protection

When a disaster strikes, you need to recover your data and applications quickly, easily, completely and reliably. Double-Take[®] RecoverNow[™] for AIX[®] is the answer. Unlike traditional backups, it replicates in real time and offers near-instantaneous recovery to meet a wide range of disaster recovery objectives in physical, virtual, cloud and mixed environments.

In addition, built-in Vision RightTime[™] CDP (Continuous Data Protection) lets you restore lost or corrupted data, recover from rolling disasters and rollback your servers to any point in time with push-button simplicity.

Double-Take RecoverNow for AIX integrates with IBM[®] PowerHA[®] SystemMirror[®] for AIX to add offsite disaster recovery protection and point-in-time recovery to the clustering capabilities of IBM PowerHA for AIX. This provides an easy-to-use and very affordable way to eliminate the high costs of both downtime and data loss, whether due to hardware failures, human errors, corruption, site outages, natural disasters or any other cause.

Key Benefits

- Protects your data and applications with real-time replication
- Allows push-button recovery to any point in time
- Simplifies disaster recovery management
- Enables protection in environments with mixed storage and operating system versions and any combination of local or remote physical, virtual or cloud platforms
- Integrates with IBM PowerHA SystemMirror for AIX to add offsite disaster recovery protection and point-in-time recovery to a high availability environment
- Provides an affordable data protection and disaster recovery solution

Disaster Recovery Protection with Double-Take RecoverNow for AIX

Protects all of your data and applications from loss

Eliminates the gaps in protection inherent in nightly tape backups or periodic snapshots by replicating changes to data and applications in real time, right up to the point of failure.

Quickly and accurately recovers data

Automates processes to provide push-button simplicity and rapid data recovery, while reducing the chance of human error during recovery operations.

Allows you to reverse data corruptions and deletions

Lets you recover to past points in time, including just before data was corrupted or deleted, prior to a failed upgrade, or before the start of a rolling disaster.

Simplifies disaster recovery management

Allows you to easily monitor and control your disaster recovery environment from any device with a browser.

Adds reliable disaster recovery to a high availability environment

Easily integrates with IBM PowerHA SystemMirror for AIX to incorporate offsite disaster recovery protection and point-in-time recovery into your HA environment.

Reduces strain on your production server

Allows you to run backups, queries, reports and other read-only jobs on the recovery server, thereby removing those workloads from the production server.

Protects all AIX environments

Hardware, storage and OS version independence enables protection on any combination of physical, virtual or cloud servers across any distance.
